

# Black Project

Buy, send, and spend crypto

# Problem

The total cryptocurrency capitalization is about 1% of global financial assets. The rapid growth of new market participants began at the end of 2017, when institutional investors came to this area. Due to a huge flow of new members the system was strained that led to higher fees and slower transaction speed.

Under such conditions new blockchains arrived that could solve the current challenges more effectively. Blockchain capabilities and the ease of use determined further prospects and market growth dynamics. And the only problem on this way is primitive blockchain infrastructure.

# Goals and Solutions

The Black Tech goal - is to expand the cryptocurrency market infrastructure by creating a single cryptoecosystem for all digital and fiat currency transactions for all market participants: beginners, crypto-enthusiasts, advanced traders, developers and business clients.

The Black Tech ecosystem consists of the next solutions:

- 1) Multifunctional Black Wallet
- 2) UnionPay debit cards
- 3) Private Crypto Cards
- 4) Black Token

# Multifunctional Black Wallet

## Multi Asset

Access over 1000 cryptocurrencies, stable coins and ERC20/TRX tokens.

## Send/Receive

Logical and legible operation design makes it easy to get started.

## P2P exchange

The ability for users to buy and sell cryptocurrencies directly with one another.

## Non-Custodial

No access to customers' keys or passwords - they have full control over assets.

## Search/Select by Label

Find the transactions by tags, for quick navigation

## Assets audit

Advanced, accurate and secure AML-scoring.

## Multiple wallets

No access to customers' keys or passwords - they have full control over assets.

## Address Book

Send Cryptocurrency quickly, easily and conveniently to all contacts

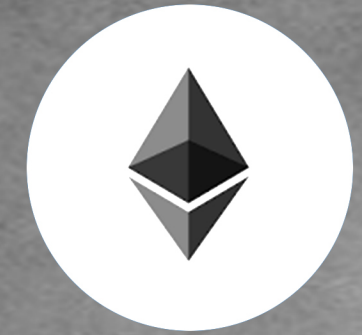

## Black Crypto Cards

Prepaid card that is linked to your account and allows you to spend crypto anywhere that Visa is accepted.

# Supported blockchains and cryptocurrencies

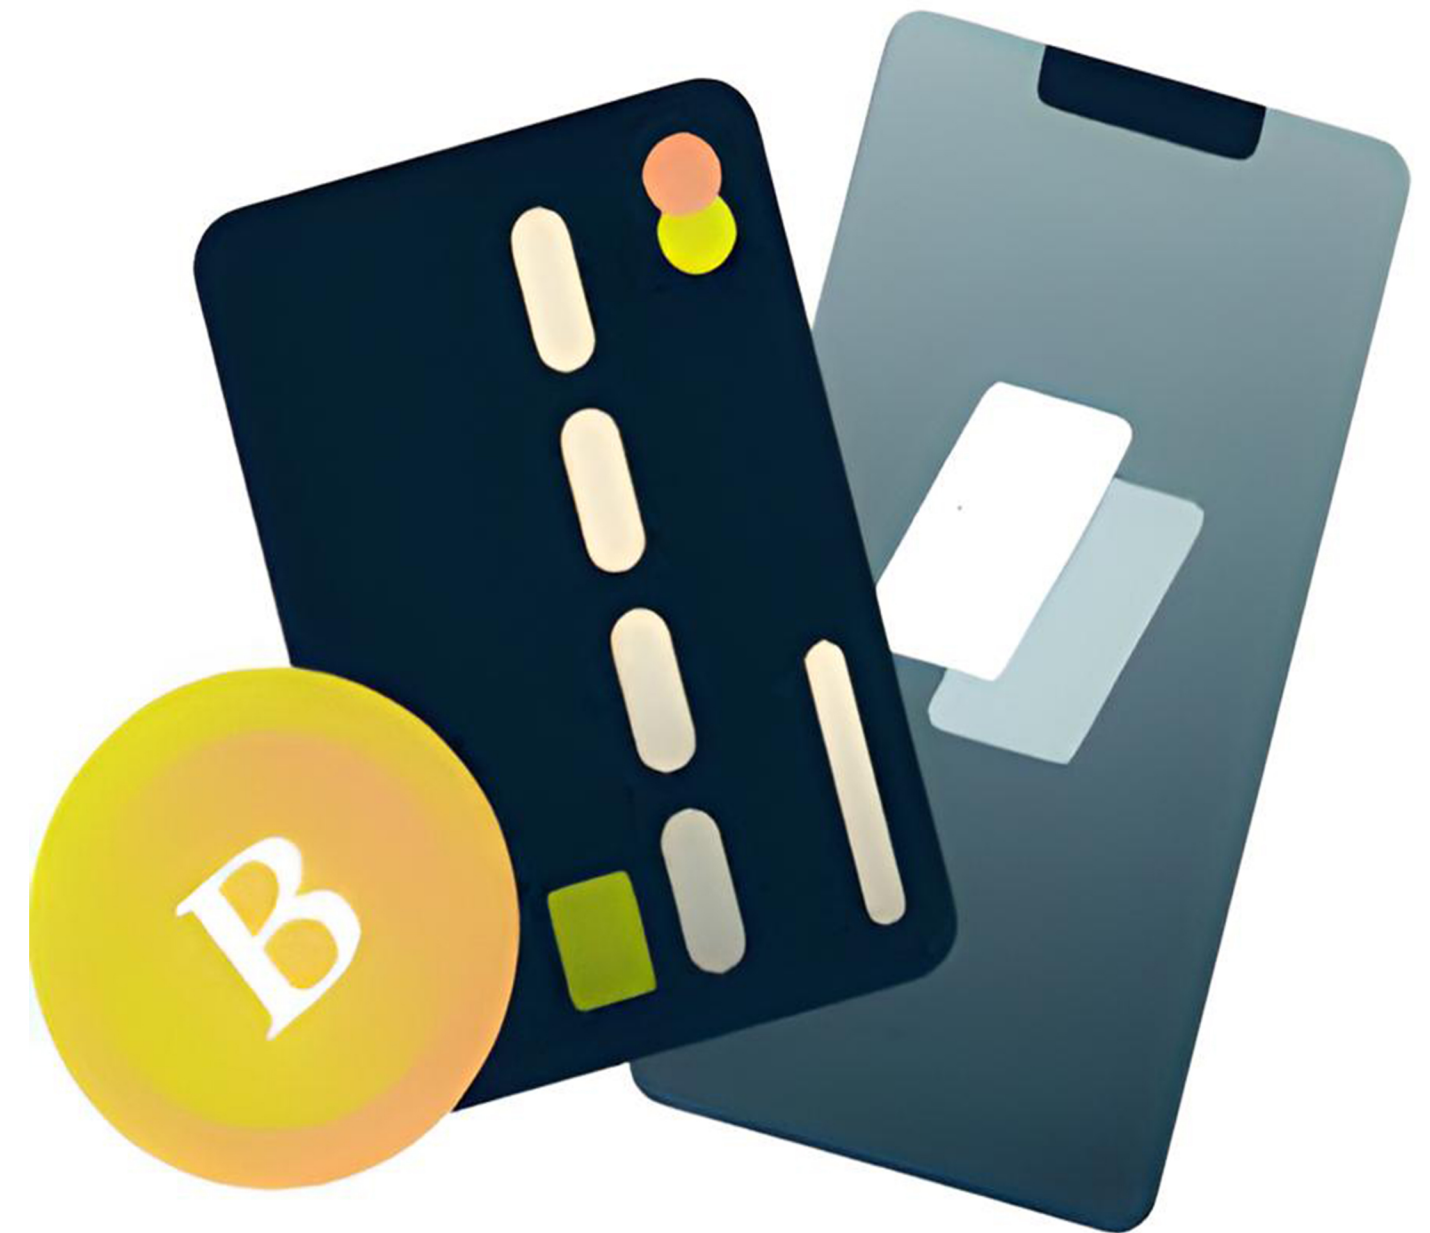

Supports the most popular cryptocurrencies and blockchains,  
including Bitcoin, Ethereum, Litecoin, Binance Coin, Tron.

# UnionPay prepaid cards

As part of BLACK crypto ecosystem, UnionPay prepaid card can be funded right from your BLACK Wallet balance. In general, UnionPay prepaid cards are the same as debit cards. But you don't need to link them to a bank account.

Top up your prepaid card with fiat or crypto and pay with cryptocurrency worldwide. Transfer money to friends, check the balance, or withdraw money in the local fiat currency whenever and wherever you want. We are happy to provide you with virtual and ATM access, 24/7 support and robust security features.

# Private Crypto Cards

Use your crypto to purchase real-world items, pay bills or subscriptions, and treat yourself. BLACK cards allow you to spend your cryptocurrency like cash while remaining completely private.

BLACK PRIVATE cards can be used like any prepaid card, at over 37 million retail and online outlets worldwide. Simply use any name and any real US billing address to purchase online and in person.

Any Point of Sale unit can have credit card numbers manually entered into them to essentially spend anywhere.

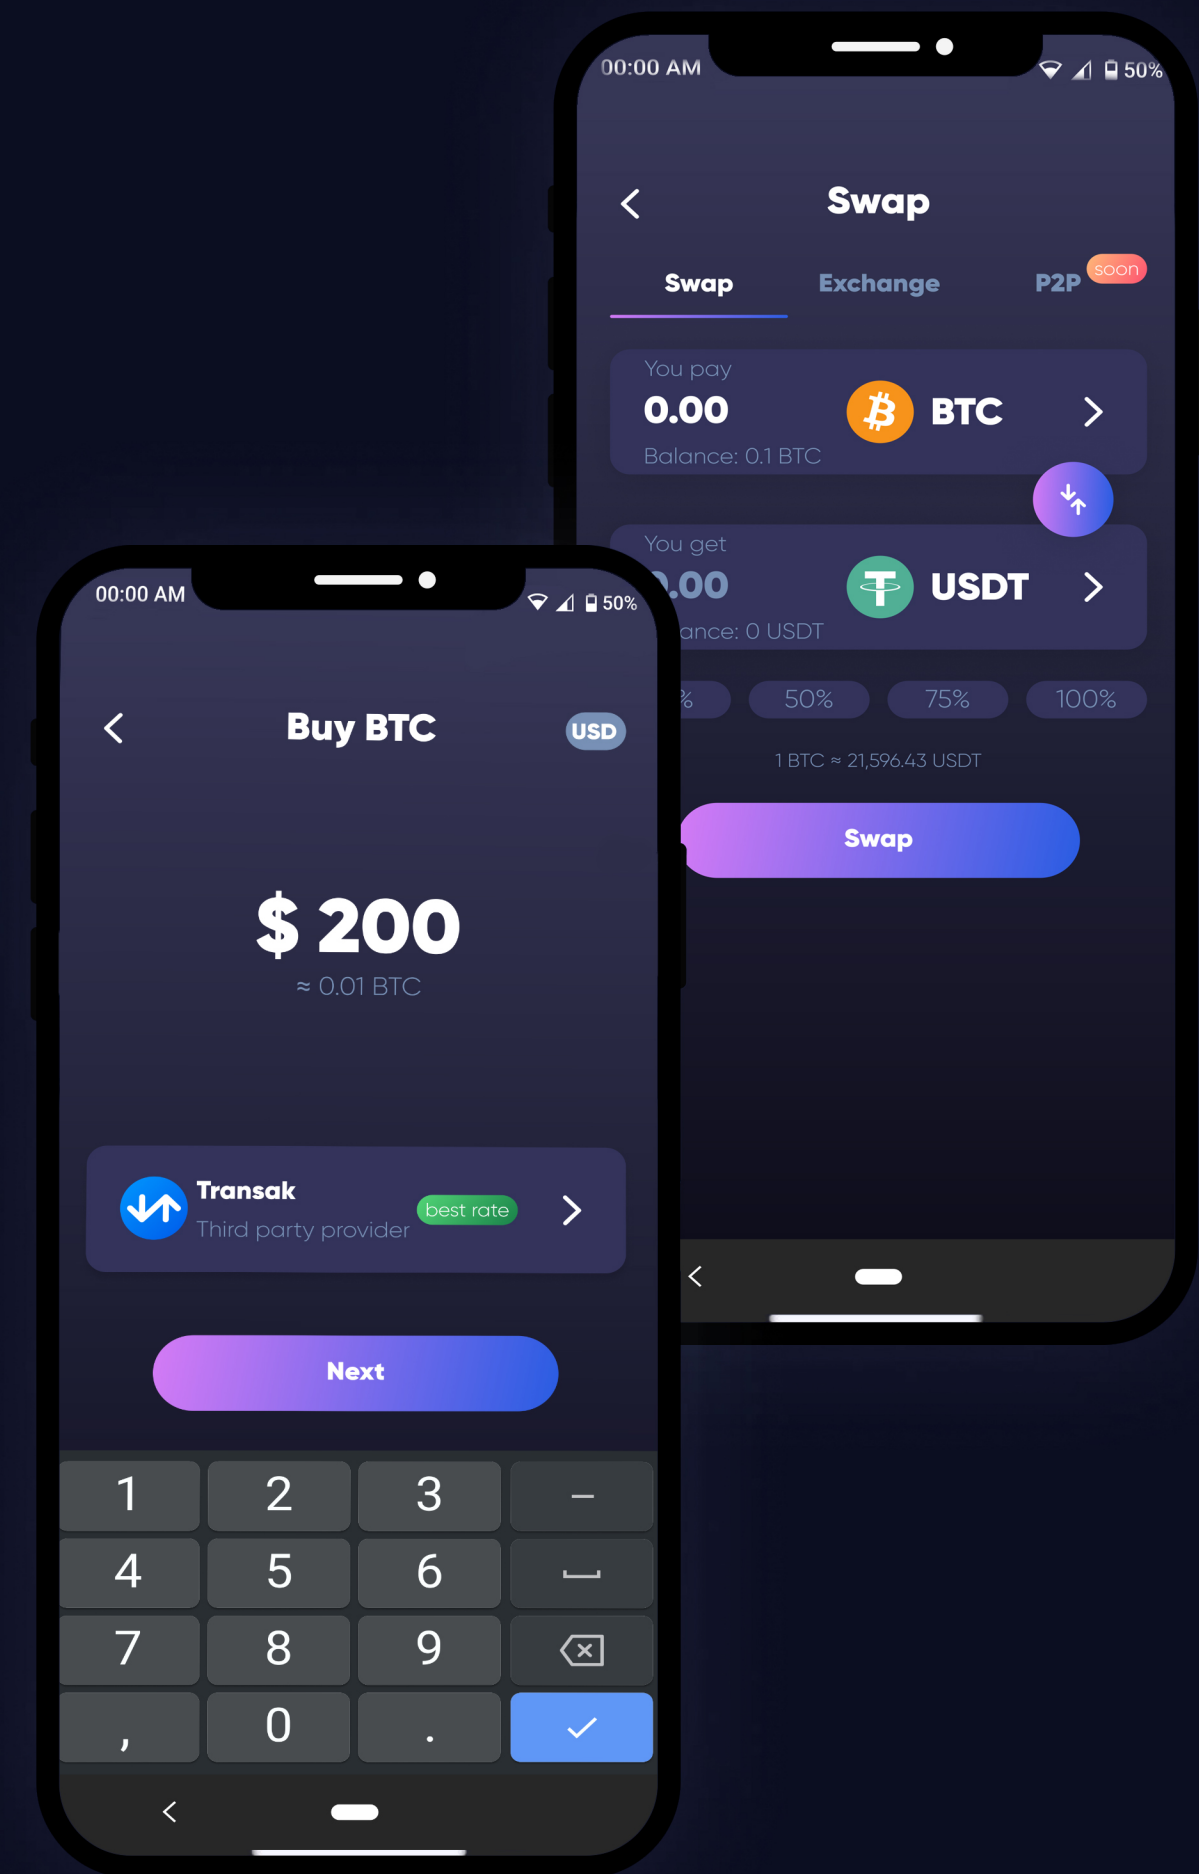

# Black Token

The launch of Black token will allow benefits for the use of the Black wallet and Black Card. We have developed a benefit and extra-services plan for Black tokens holders that we will be releasing in the near future.

- Total Supply: 1 Billion
- Symbol: Black
- Token Type: BEP20
- Tax: Free

# Black Token

## Benefits in Card Plans

One of the benefits that Black tokens holders will receive is discounts on card fees and plans. Users will receive Black cashback when spending their funds with the Black Prepaid Card.

## Benefits in Customer Service Support Fees

Tokens holder will benefit of dedicated customer support based on the Card plan associated to their account. Users will receive a cashback in Black token when executing an exchange transaction within the Black wallet.

## Phase 1

1. Market and competitor analytics
2. Hypotheses Generation
3. Custdev interviews
4. Prototype development
5. User tests running
6. Prototype update
7. Financial Partnerships
8. Google Play Listing
9. App Store Listing
10. ProductHunt Listing
11. Public AMAs
12. Initial Impact Marketing

## Phase 2

1. Pinksale Launchpad Presale
2. Pancakeswap listing
3. Crowdsourcing activities
4. Team expansion
5. Dedicated support service launch
6. Ledger Nano X hardware wallet integration
7. Browser extension for web3 integrations development

## Phase 3

1. NFT explorer development
2. DeFi explorer development
3. Cybersecurity organisations partnership agreements
4. Security settings expansion and new features development
5. Advanced Cash payment system partnership agreement
6. AML solution integration
7. Cryptocurrency payment gateway integration with CEX

## Phase 4

1. Crypto cards module development
2. UnionPay debit cards issue
3. Visa private cards issue
4. P2P exchange development
5. Marketplace services from third-party developers development
6. B2B services integration
7. Startup Wise Guys Accelerator participation
8. Web Summit Event participation
9. Slush (Startup Event) participation
10. Hub.berlin Conference participation
